

Welcome!

The Spectrum Advantage

At Spectrum Lasik, you will receive the most customized vision correction possible with a 5-Star experience. Located in Greenville, SC, Spectrum Lasik is owned and operated by Clemson Eye with clinics in Anderson, Clemson, Easley and Greenville. You may conveniently schedule your post-operative care in any Clemson Eye location or with participating Optometric affiliates. We have created this kit to inform you about the vision correction process, its affordability, and how to prepare for your procedure.

Best Results Ever Submitted to FDA*

With over 17 years of experience with laser vision correction, our skilled medical team will provide you with exceptional clinical outcomes and personalized service. We own the most advanced laser systems currently available. OptiLASIK technology is used to perform bladeless LASIK and treats a wider range of patients. It is the fastest LASIK experience and only available at Spectrum. Not all laser vision correction technology is created equal! *All results are at six months - the results are publicly available at: www.fda.gov

Customized Options to treat 95% of people

We offer more options to safely treat patients who have been told they are not suitable for laser eye treatment at other clinics. If you are not a candidate for LASIK or ASA/PRK or have lost near focus, then a Refractive Lens Exchange (RLE) may be the perfect option. RLE provides a full range of vision and you will never develop a cataract. Another solution for those who suffer from extreme nearsightedness may be an Implantable Contact Lens (ICL). Whichever procedure is best for you, we are here to see you and your family through a lifetime of visual health.

"In my line of work precision is paramount. I trusted my eyes to Spectrum and I'm so glad I did!"

Marcus J. Cox, MD, Cardiologist at Carolina Cardiology
